IV. Reflection

AI-Generation is a powerful tool for productivity. I was surprised by how well Replit made a website in a matter of minutes, that would probably take me a couple of hours or days. It had no errors, and I imagine changing the code manually can be easily done or let Replit do the work for you. Prompting it according to your preference also needs you to be specific so it can give you your desired results. It's a scary thing to know that AI can do this in a blink of an eye, but at the same time, I imagine it boosts productivity by a big margin. However, we must always keep in mind that we need to use this responsibly and won't become dependent on AI completely.
